

Examples of Competition Structures

Individual Structure

There is one diver, who completes two dives, each of which has five judges. The overall score is calculated as the sum of the scores on the individual dives. For each individual dive, the high and low scores are dropped, and the final score is the sum of the remaining judges scores multiplied by the degree of difficulty.

Team Structure

There are multiple divers, each of which is scored as in the individual structure. The team score is the sum of the individual scores.
