Specifications: `CourseReader`

As in the previous version, `CourseReader` is a utility class for reading `.grd` files. The `CourseReader` class must now satisfy the following modified specifications.

1. The `readCategory()` method must now return a `CompositeGrade` object that contains information about the "next" category (which contains `size` different `Grade` objects) that can be read using the `BufferedReader` named `in`.

2. The `readCourse()` method must return a `CompositeGrade` object that contains `size` different `CompositeGrade` objects corresponding to the categories.
