

# adz Files (v1)

## Overview

adz files contain advertisements that are targeted for a specific bookz file.

## Format

adz files contain a continuous stream of ASCII characters.

They do not contain carriage-return (ASCII 13) or line-feed (ASCII 10) characters. However, they are formatted in some sense. Specifically, adz files consist of a sequence of advertisements, each of which is exactly 40 characters long (padded on the right with spaces, if necessary).

The first two characters of each advertisement contain the amount of time to wait before displaying the advertisement (in seconds).

The remaining 38 characters of each advertisement contain the text of the advertisement.

## Assumptions

When processing an adz file you may assume that it is defect-free.
