Specifications: `Course`

A `Course` object contains information about all of the categories of graded assessments in a course. For example, a typical Computer Science Course object might consist of the categories "Programming Assignments", "Homeworks", "Mid-Term Exam", and "Final Exam". In addition to the obvious specifications illustrated in the UML class diagram, the `Course` class must satisfy the following specifications.

1. `Course` objects must be immutable.
2. The constructor must "store" aliases of its arguments.
