bookz_server

Overview

A `bookz_server` is a central repository of `bookz`. A client can request a `bookz` from a `book_server` using the bookz Transfer Protocol (bTP).

Requirements

The requirements for the `bookz_server` follow.

1. The system must comply with the bookz Transfer Protocol (bTP).
2. The system must be able to handle multiple requests concurrently.
3. The system must run "forever" (i.e., until it is interrupted/killed).
4. The system must load bookz from the working directory.
