

An Overview of Exceptions in Java

Reading an exception message

Exception Class Categories

There are two kinds of exceptions, checked and unchecked. All exceptions that you have seen thus far have been unchecked exceptions. Unchecked exceptions are in the category of **RuntimeException**. All other exceptions are checked exceptions.

java.lang

Class Exception

```
java.lang.Object
└ java.lang.Throwable
  └ java.lang.Exception
```

All Implemented Interfaces:

[Serializable](#)

Direct Known Subclasses:

[AclNotFoundException](#), [ActivationException](#), [AlreadyBoundException](#), [ApplicationException](#),
[AWTException](#), [BackingStoreException](#), [BadAttributeValueExpException](#),
[BadBinaryOpValueExpException](#), [BadLocationException](#), [BadStringOperationException](#),
[BrokenBarrierException](#), [CertificateException](#), [ClassNotFoundException](#),
[CloneNotSupportedException](#), [DataFormatException](#), [DatatypeConfigurationException](#),
[DestroyFailedException](#), [ExecutionException](#), [ExpandVetoException](#), [FontFormatException](#),
[GeneralSecurityException](#), [GSSEception](#), [IllegalAccessException](#), [IllegalClassFormatException](#),
[InstantiationException](#), [InterruptedException](#), [IntrospectionException](#), [InvalidApplicationException](#),
[InvalidMidiDataException](#), [InvalidPreferencesFormatException](#), [InvalidTargetException](#),
[InvocationTargetException](#), [IOException](#), [JAXBException](#), [JMEception](#), [KeySelectorException](#),
[LastOwnerException](#), [LineUnavailableException](#), [MarshalException](#), [MidiUnavailableException](#),
[MimeTypeParseException](#), [MimeTypeParseException](#), [NamingException](#),
[NoninvertibleTransformException](#), [NoSuchFieldException](#), [NoSuchMethodException](#),
[NotBoundException](#), [NotOwnerException](#), [ParseException](#), [ParserConfigurationException](#),
[PrinterException](#), [PrintException](#), [PrivilegedActionException](#), [PropertyVetoException](#),
[RefreshFailedException](#), [RemarshalException](#), [RuntimeException](#), [SAXException](#), [ScriptException](#),
[ServerNotActiveException](#), [SOAPException](#), [SQLException](#), [TimeoutException](#),
[TooManyListenersException](#), [TransformerException](#), [TransformException](#),
[UnmodifiableClassException](#), [UnsupportedAudioFileException](#), [UnsupportedCallbackException](#),
[UnsupportedFlavorException](#), [UnsupportedLookAndFeelException](#), [URIReferenceException](#),
[URISyntaxException](#), [UserException](#), [XAException](#), [XMLParseException](#), [XMLSignatureException](#),
[XMLStreamException](#), [XPathException](#)

```
public class Exception
extends Throwable
```

The class `Exception` and its subclasses are a form of `Throwable` that indicates conditions that a reasonable application might want to catch.

Since:

JDK1.0

Constructor Summary

[Exception\(\)](#)

Constructs a new exception with `null` as its detail message.

[Exception\(String message\)](#)

Constructs a new exception with the specified detail message.

[Exception\(String message, Throwable cause\)](#)

Constructs a new exception with the specified detail message and cause.

[Exception](#)([Throwable](#) cause)

Constructs a new exception with the specified cause and a detail message of (`cause==null ? null : cause.toString()`) (which typically contains the class and detail message of cause).

Method Summary

Constructor Detail

Exception

```
public Exception()
```

Constructs a new exception with null as its detail message. The cause is not initialized, and may subsequently be initialized by a call to [Throwable.initCause\(java.lang.Throwable\)](#).

Exception

```
public Exception(String message)
```

Constructs a new exception with the specified detail message. The cause is not initialized, and may subsequently be initialized by a call to [Throwable.initCause\(java.lang.Throwable\)](#).

Parameters:

message - the detail message. The detail message is saved for later retrieval by the [Throwable.getMessage\(\)](#) method.

Exception

```
public Exception(String message,  
                 Throwable cause)
```

Constructs a new exception with the specified detail message and cause.

Note that the detail message associated with cause is *not* automatically incorporated in this exception's detail message.

Parameters:

message - the detail message (which is saved for later retrieval by the [Throwable.getMessage\(\)](#) method).

`cause` - the cause (which is saved for later retrieval by the [Throwable.getCause\(\)](#) method). (A null value is permitted, and indicates that the cause is nonexistent or unknown.)

Since:

1.4

Exception

```
public Exception(Throwable cause)
```

Constructs a new exception with the specified cause and a detail message of (`cause==null ? null : cause.toString()`) (which typically contains the class and detail message of `cause`). This constructor is useful for exceptions that are little more than wrappers for other throwables (for example, [PrivilegedActionException](#)).

Parameters:

`cause` - the cause (which is saved for later retrieval by the [Throwable.getCause\(\)](#) method). (A null value is permitted, and indicates that the cause is nonexistent or unknown.)

Since:

1.4
